Project Developed Source Code Policy Terms and Conditions

V1.1 Dated 02 January 2022

This document is created to define the terms and conditions for all Source Codes built by gistec and delivered to their customers. All source codes have been built using gistec common libraries where gistec is considered its sole owner.

Delivering the source code does not mean a waiver of its ownership to the receiving party and all the terms and conditions stated herewith and delivered to the customer with the Source Code Delivery Note are considered fully read and approved by the customer upon signing the Delivery Note.

The customer is not allowed to re-use gistec's common libraries embedded in the delivered source code nor is allowed to distribute it internally or to any third-party without the prior written approval and consent from gistec. The source code is provided under license of use and for reference only without any liability from gistec on any action or activity done by the customer using the delivered source code.

Distributing the source code to any third-party will be considered a breach to the Source Code Delivery Terms and Conditions and therefore gistec has the full right to request from the customer compensations in any nature it sees fit.

The source code delivered to the customer is not covered under any Annual Maintenance Contract or Agreement, and any request or claim from the customer using this source code will not be catered for under such contracts or agreements. Such requests similar but not limited to changes, troubleshooting, enhancements, support, etc... will have to be agreed on between gistec and the customer through a separate and new agreement intended for that purpose only.

The customer agrees that the terms and conditions in this document are subject to change at any time and therefore any introduced changes are inevitably considered fully agreed on and acknowledged by the customer.
