

**Technology Roundtable**

**Streamlining Enterprise GIS Processes in Telecommunication, Utility, Municipality and Emergency Management**

*Presenter: Tommy Siniard, Chief Technology Officer (CTO), 3-GIS*

Planning, designing, and delivering asset data to web clients and mobile users across the enterprise is a complex, time-consuming, and expensive task. 3-GIS, our business partner from the US, will present solutions including case studies and live demos that address this issue.

A seminar and open forum at the same time, participants can put forward questions and project issues for discussion during the sessions.

AGENDA	
0930 - 1000	Registration
1000 - 1015	Opening & Welcome
1015 - 1030	About 3-GIS
1030 - 1115	Session 1: 3-GIS Solutions on Top of ArcGIS Server for telecom, utility, municipality and emergency management <ul style="list-style-type: none"> <li>• Network Express (Nx)</li> <li>• Express Conductor (xC)</li> <li>• Field Express Chameleon (FxC)</li> <li>• Buzz for Blackberry (Bz)</li> <li>• What's Coming for ArcGIS Server 10</li> </ul>
1115 - 1145	Open Discussion, Q&A, Break
1145 - 1230	Session 2: Live demos for 3-GIS products (Nx, FxC, xC and Bz) and case studies in utilities and local government applications

**Network Express (Nx)**

3-GIS Network Express is a browser-based full editing client that manages the complex task of planning, designing, and delivering asset data to web clients and mobile users across the enterprise. Built on leading ESRI ArcGIS Server technology, Network Express provides an open, standards-based platform to build and document your entire networked enterprise- Nx supports electric, gas, water, telecom, and virtually any connected network of assets.

**Field Express Chameleon (FxC)**

Field Express Chameleon is the latest innovative solution to provide the right data at the right place at the right time in a user format easy to adopt, use and understand. Developed on leading ESRI mobile technology, Chameleon provides more than simple access to your corporate data. Chameleon delivers a real-time editing and posting solution to keep your data accurate and your enterprise informed.

**Express Conductor (xC)**

Express Conductor is the enabling technology behind the enterprise publishing of GIS data for 3-GIS. Express Conductor provides a scalable GIS processing and data management solution for field, engineering, remote, and front-office needs. Express Conductor is IT and OGC compliant and interoperates well with other enterprise software. Using Express Conductor as your portal, you can share your corporate data across the enterprise.

**Buzz for Blackberry (Bz)**

3-GIS Buzz is an easy-to-use mobile viewing solution designed specifically for BlackBerry smartphones. Developed to utilize ESRI's ArcGIS Server technology, Buzz makes possible the goal of getting GIS data into the hands of the entire enterprise.
