

Creating and Editing Data with ArcGIS Pro

DURATION: 1 Day

DESCRIPTION

This course teaches best practices to create accurate geographic data and maintain it over time. You will get ample hands-on practice with a variety of ArcGIS Pro tools that streamline the editing process and decrease the potential for errors when updating your GIS database.

LEARN HOW TO

- Apply a standard editing workflow to manage updates to geographic data.
- Configure ArcGIS Pro application and project settings to support efficient editing.
- Create, modify, and delete 2D and 3D features and attributes.
- Solve common data alignment issues and maintain spatial relationships among features when editing.

PREREQUISITE

- Completion of ArcGIS Pro: Essential Workflows or equivalent knowledge.

COURSE OUTLINE

- Introduction to editing
- Editing in ArcGIS Pro
- Editing tasks
- Exercise 1: Investigate ArcGIS Pro editing tools
 - Start ArcGIS Pro and open a project
 - Explore the Create Features pane
 - Investigate modification tools
 - Discard edits
- What can you edit?
- Creating, modifying, and deleting features
 - Configure the layer attributes to make editing more efficient
 - Set layer selectability and editability

Creating 2D features

Preparing to edit GIS data

- Exercise 2A: Investigate coordinate systems
 - Open an ArcGIS Pro project and identify map and layer spatial references
 - Measure the offset between layers
 - Change the map XY coordinate system and add a new layer
- Lining up data
- Managing attributes
- Exercise 2B: Enable editor tracking on a feature class
 - Open an ArcGIS Pro project and view the data attributes
 - Run the Enable Editor Tracking tool
 - Make an edit
- Layer symbology for editing
- App and project settings for editing
- Configuring ArcGIS Pro and your project for editing
- Exercise 2C: Prepare a map for editing
 - Open an ArcGIS Pro project and change the default measurement units
 - Change the map's coordinate system
- Feature creation workflow
- Feature templates
- Group and preset templates
- Choosing a construction tool
- Managing feature templates
- Exercise 3A: Create 2D features using feature templates
 - Start ArcGIS Pro and zoom to a bookmark
 - Investigate how symbology affects feature templates
 - Use a feature template to create new geometry
 - Create attributes for your new feature
 - Create a preset template
 - Create a new set of features using a preset template
- Dynamic constraints
- Snapping
- Editing grid
- Creating attributes
- Exercise 3B: Filter the undo and redo stacks
 - Open an ArcGIS Pro project and create new features
 - Undo and redo actions
- Exercise 3C: Use placement tools to create features
 - Open an ArcGIS Pro project and zoom to a bookmark
 - Prepare the editing environment

- Create new feature geometry
- Use snapping to create new polygons
- Use dynamic constraints and snapping to create a polygon
- Add attributes to new features
- Mark an error as an exception
- Use editing tools to fix an error
- Use a predefined fix to correct a data error
- Correct topology errors
- Revalidate a topology

Modifying 2D features

- Modifying GIS data
- Feature modification workflow
- Modification tools
- Modifying geometry and attributes
- Exercise 4: Modify existing features
 - Open an ArcGIS Pro project
 - Relocate a point feature
 - Modify polygon shapes
 - Connect a multipart feature
 - Combine two features

Maintaining spatial integrity

- Using map topology
- Exercise 5A: Use map topology while editing
 - Create a map topology
 - Use a topology to modify coincident point and line features
 - Use the Align Edge tool to eliminate polygon overlaps
 - Use the Align Edge tool to remove gaps
- Geodatabase topology
- Comparing map and geodatabase topology
- Exercise 5B: Use geodatabase topology to maintain spatial integrity
 - Start ArcGIS Pro and investigate topology rules
 - Validate a topology
 - Use the Error Inspector to locate errors
 - Fix a topology error

Editing annotation

- Annotation
- Creating annotation
- Exercise 6A: Create annotation features
 - Create feature-linked annotation
 - Create a new annotation feature class
 - Create standard annotation
- Modifying annotation
- Using the Attributes pane to modify annotation
- Exercise 6B: Modify existing annotation
 - Modify annotation position
 - Edit annotation text
 - Split annotation to two lines
 - Modify annotation rotation and position
 - Use vertices to modify annotation features

Creating and modifying 3D features

- Points, lines, and polygons in 3D
- Placement tools in 3D
- Exercise 7A: Create polygon features in a 3D scene
 - Start ArcGIS Pro and check the vertical coordinate system
 - Add a cartographic offset
 - Create a new polygon feature
 - Use snapping to create a coincident polygon

ARCGIS DESKTOP

Creating and Editing Data with ArcGIS Pro

- Extrude z-aware polygons
- Create a point feature and symbolize it in 3D
- Multipatch data in ArcGIS Pro
- Creating multipatch data in ArcGIS Pro
- Exercise 7B: Create a new multipatch feature
 - Prepare the ArcGIS Pro scene
 - Sketch a new multipatch feature
- Duplicating features vertically
- Modifying 3D data in ArcGIS Pro
- Exercise 7C: Modify multipatch data in ArcGIS Pro
 - Rotate a 3D feature
 - Add a new face to an existing multipatch feature
 - Extrude a multipatch face
 - Create new faces using interactive guides
